Toon shading

Remap $(n \cdot I)$ from lighting calculation

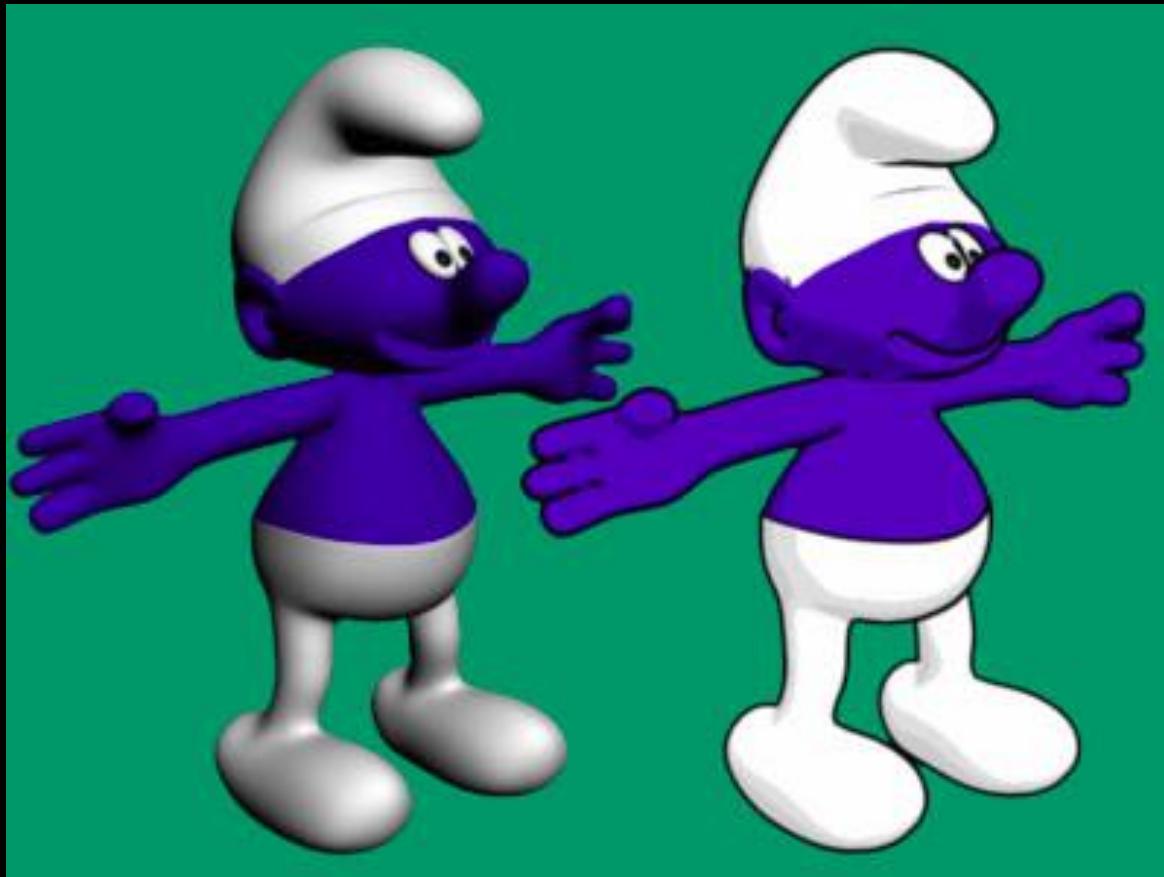

- Or $(n \cdot v)$ for headlight
- Can be done by texture lookup (1D)

Crease Stylization

“Rubber-stamping”

Synthesis from Example

Synthesis uses Markov model.

Similar to “video textures” [Schödl 00]

Stylization as Offsets

- Artist over-sketches crease
- Stylization recorded as 2D offsets
- Applied to new base path

Silhouette Stylization

Silhouettes are view-dependent.

- Problem #1: localized stylization?
- Solution: “rubber-stamp” globally

Silhouette Tracking

Silhouettes are view-dependent.

- Problem #2: parameterization coherence
- Solution: screen-space tracking

WYSIWYG NPR

[Kalnins02]

- Draw into 3D scene
- Retain style in new views
- Ensure coherent animation

Aesthetic flexibility

How to Describe Shape-Conveying Lines?

- Image-space features
- Object-space features
 - View-independent
 - View-dependent

[Flaxman 1805]

Image-Space Lines

- + Intuitive motivation; well-suited for GPU
- Difficult to stylize

Examples:

- Isophotes (toon-shading boundaries)
- Edges (e.g., [Canny 1986])
- Ridges, valleys of illumination
[Pearson 1985, Rieger 1997,
DeCarlo 2003, Lee 2007, ...]

Image Edges and Extremal Lines

Edges:

Local maxima of
gradient magnitude,
in gradient direction

Ridges/valleys:

Local minima/maxima of
intensity, in direction of
max Hessian eigenvector

View-Independent Object-Space Lines

- + Intrinsic properties of shape;
can be precomputed
- Under changing view, can be
misinterpreted as surface markings

View-Independent Object-Space Lines

Topo lines: constant altitude

View-Independent Object-Space Lines

Creases: infinitely sharp folds

View-Independent Object-Space Lines

Ridges and valleys (crest lines)

- Local maxima of curvature
- Sometimes effective, sometimes not

View-Dependent Object-Space Lines

- + Seem to be perceived as conveying shape
- Must be recomputed per frame

What Lines to Draw?

Silhouettes:

- Boundaries between object and background

What Lines to Draw?

Occluding contours:

- Depth discontinuities
- Surface normal perpendicular to view direction

Occluding Contours

For any shape: locations of depth discontinuities

- View dependent
- Also called “interior and exterior silhouettes”

no contour from this viewpoint

contour from this viewpoint

Occluding Contours

For smooth shapes: points at which $n \cdot v = 0$

Occluding Contours on Meshes

Applying either definition on polygonal meshes
can result in messy lines

Occluding Contours on Meshes

[Hertzmann 00]

Alternative: interpolate normals within faces

- Start with per-vertex normals
- Interpolate per-face (same as Phong shading)
- Compute $n \cdot v$ at each point, find zero crossings
- Potential snag: visibility

Occluding Contours on Meshes

Contours along edges

■ Frontfacing

■ Backfacing

— Contour

Contours within faces

What Lines to Draw?

There are other lines...

What Lines to Draw?

There are other lines...

What Lines to Draw?

There are other lines...

Hypothesis: some are “almost contours”

[Flaxman 1805]

Suggestive Contours

“Almost contours”:

- Points that become contours in nearby views

contours

contours +
suggestive contours

Suggestive Contours: Definition 1

Contours in nearby viewpoints

(not corresponding to contours in closer views)

Suggestive Contours: Definition 2

$n \cdot v$ not quite zero, but a local minimum
(in the projected view direction w)

contours

contours +
suggestive contours

Abstraction in NPR

User guided approaches

- the user explicitly marks the important content

[Durand et al. 2001]

[Hertzmann 2001]

Abstraction in NPR

Indication in pen and ink illustration

- the user specified what content was important

[Winkenbach and Salesin 1994]

Abstraction in NPR

Provide control over point of emphasis
– control clutter in the rendered image

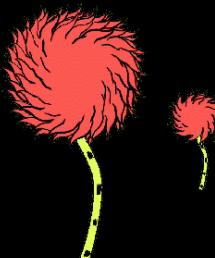

[Cole et al. 2006]

Abstraction in NPR

Rendering specific content: trees

- programatically leave out lines in center of tree

[Kowalski et al. 1999]

[Deussen 2000]

Abstraction in NPR

Select elements based on density and clutter
– drop strokes in areas of high density

[Winson and Ma 2004]

[Grabli et al. 2004]

Abstraction in NPR

User guided approaches

- infer important content from a user's eye movements
- evaluate using eye tracking [Santella and DeCarlo 2004]

[DeCarlo and Santella 2002]

Results...

Summary

NPR provides control over style, abstraction

Common ingredients:
toon shading,
outline strokes,
hatching, paint,
paper effect
